

Oluwaseun Ogedengbe

713-299-6530 | seun40@gmail.com | ogewan.github.io | linkedin.com/in/seun40

Senior Full-Stack Engineer | Python, TypeScript, React, Next.js, Node.js | End-to-End Delivery, PostgreSQL, AWS

PROFESSIONAL SUMMARY

- 10+ years building full-stack features end to end across SaaS products, research tools, and enterprise platforms with full ownership from design to production.
- Mentored junior developers in domain knowledge and best practices; developed internal training materials that reduced onboarding ramp-up time across teams.
- Led frontend architecture, system design, end-to-end delivery for LeanData's BookIt scheduling suite; established coding standards, shared services, and release-ready workflows.
- Python backend experience: built and ran a Flask + SQLAlchemy service on PostgreSQL that aggregated edit histories across a petabyte-scale, ML-reconstructed dataset for publication attribution.
- Experienced with use of AI tooling in production engineering work (Claude Code, Cursor, GitHub Copilot, Cubic) for implementation, refactors, and code review, including tool evaluation for the dev team.

CORE SKILLS

- **Languages:** Python, TypeScript, JavaScript, SQL, C#, HTML5/CSS3
- **Frontend:** React, Angular, Next.js, React Native, Electron, Vue, SCSS, Tailwind, Bootstrap, Mobile and Responsive Design, Accessibility (ARIA, WCAG), i18n/l10n
- **Backend & Data:** Python, Flask, SQLAlchemy, Node.js, REST APIs, PostgreSQL, MySQL, MongoDB
- **Architecture & Process:** OOP, design patterns, SOA, microservices, monorepo workflows, system design, MVC, Agile/Scrum
- **Testing & Quality:** Jest, Puppeteer, Selenium, E2E automation, CI pipelines
- **DevOps & Cloud:** Docker, Jenkins CI/CD, Webpack, Git, GitHub, Google Cloud, AWS
- **Observability & Security:** New Relic (monitoring, logging, alerting), Burp Suite, XSS testing, SAST, DAST

PROFESSIONAL EXPERIENCE

LeanData (Series C)

Apr 2022 - Jan 2026

Senior Frontend Engineer (Principal Frontend Architect, BookIt Suite)

- BookIt Suite: Principal architect and developer for LeanData's enterprise scheduling platform built in Angular 16-18 on a Node.js and PostgreSQL backend; owned core application design through multiple releases and future revisions.
- Led and mentored junior developers across in multiple dev teams, setting guidelines for code implementation standards, design feedback, code review, and new hire assessments.
- Implemented frontend monitoring and logging with New Relic across products, improving production visibility and reducing time-to-diagnosis by 40%.
- Created microservice-style platform layers and a shared design system / Angular component library for the suite: availability, state management, accessibility (ARIA, WCAG), localization/i18n, and machine translation.
- Designed and implemented a monorepo approach for BookIt products and partnered on CI/CD improvements, reducing build/test friction and improving release reliability.
- BookIt for Forms: enabled embeddable scheduling for webforms, including custom CSS injection and translated/customized copy.
- BookIt Handoff: architected initial implementation and advised refactor/redesign for v2 to improve maintainability and UX.
- BookIt Links: built framework to support custom links, landing pages, and embedded routing forms within the scheduling flow.

- Used AWS to manage and deliver customer-specific assets (custom logos for BookIt Suite) and to support storage/management of custom templates for LeanData Router.
- Kept production systems healthy alongside new feature work: dev on-call rotations, production incident triage, and customer escalations; reduced recurring issues by 20%.

Seung Lab, Princeton University

Jul 2019 - Jul 2023

Research Programmer

- Contributed to Neuroglancer, a 3D WebGL volumetric viewer written in TypeScript for the Connectome project, used by scientists and public proofreaders.
- Added user-facing capabilities including bug reporting, segment highlighting, and state sharing to streamline collaboration and support.
- Extended the annotation system with additional tools to improve analyst workflow and throughput. Average proofreading turnaround improved by 40%.
- Built NG-Extend, a Vue wrapper adding community-oriented features (e.g., chat) around Neuroglancer workflows.
- ProofreadingProgress: built a Python service (Flask, SQLAlchemy, PostgreSQL) with Vue frontend that ingested and aggregated edit changelogs over a petabyte-scale ML-segmented dataset to attribute contributions in Nature publications; deployed on Google Cloud, improved query responsiveness by 10%.

The Reynolds and Reynolds Company

Apr 2016 - Jun 2019

Systems Software Developer

- Delivered web application enhancements and production fixes in response to customer issues across dealerships in the US, Canada, and the UK.
- Introduced web development training content (HTML, CSS, JavaScript, Node.js) for new-hire onboarding, decreasing ramp-up time by an average of 2 weeks for new hires.
- Modernized legacy Adobe ColdFusion applications by migrating to ECMAScript 5 with a Node.js backend, improving maintainability and performance by 60%.
- Built end-to-end test automation and CI pipelines (Selenium + Jenkins on CentOS 7), then migrated to Jest + Puppeteer in Docker to improve reliability and reduce execution time by 20%.

SELECTED PROJECT(S)

- **Project O'Neil** - Developed a playable 4X space strategy proof-of-concept using Electron, React, Three.js, R3F, and TypeScript with a real-time orbital simulation engine, procedural generation, economic/political/social simulation layers, and a 3D orbital map.
- **comix-ngn** - Built a lightweight JavaScript single-page application (AngularJS-inspired) for serving web comics directly in the client browser, reducing server-side hosting requirements.
- **Bombberman.Ai** - Developing a Bomberman 64-inspired 3D game using Electron, React, R3F, and TypeScript with a deterministic simulation engine and TensorFlow-driven AI, evolving into a generalized emulator ML platform for training agents on N64 games.

EDUCATION

Southern New Hampshire University

Dec 2018

M.S. Information Technology - GPA 3.9

The University of Chicago

Dec 2015

B.A. Computer Science
