Senior Frontend / Full-Stack Engineer | TypeScript, React, Node.js | Platform Architecture, AppSec, Observability

PROFESSIONAL SUMMARY

- 10+ years building web and mobile applications across SaaS products, research tools, and enterprise platforms.
- Mentored junior developers in domain knowledge and best practices; developed internal training materials that reduced onboarding ramp-up time across teams.
- Led frontend architecture, system design, end-to-end delivery for LeanData's BookIt scheduling suite; established coding standards, shared services, and release-ready workflows.
- Security-minded engineer: implemented audit-required AppSec practices (XSS testing, SAST, DAST) and strengthened production monitoring and incident response.
- Deep visualization experience: contributed to Neuroglancer (TypeScript + WebGL) and built tools used by scientists and public proofreaders.

CORE SKILLS

- **Languages:** TypeScript, JavaScript, Python, C#, HTML5/CSS3
- **Frontend:** React, Angular, Next.js, React Native, Electron, Vue, SCSS, Tailwind, Bootstrap, Mobile and Responsive Design, Accessibility (ARIA, WCAG), i18n/l10n
- **Backend & Data:** Node.js, Flask, SQLAlchemy, REST APIs, PostgreSQL, MySQL, MongoDB
- **Architecture & Process:** OOP, design patterns, SOA, microservices, monorepo workflows, system design, MVC, Agile/Scrum
- **Testing & Quality:** Jest, Puppeteer, Selenium, E2E automation, CI pipelines
- **DevOps & Cloud:** Docker, Jenkins CI/CD, Webpack, Git, GitHub, Google Cloud (ProofreadingProgress), AWS (assets for BookIt logos; Router templates)
- **Observability & Security:** New Relic (monitoring, logging, alerting), Burp Suite, XSS testing, SAST, DAST

PROFESSIONAL EXPERIENCE

LeanData (Series C)

Apr 2022 - Jan 2026

Senior Frontend Developer (Principal Frontend Architect, BookIt Suite)

- BookIt Suite: Principal frontend architect and developer for LeanData's enterprise scheduling platform built in Angular 16-18; owned core application design through multiple releases and future revisions.
- Led audit-required application security initiatives across LeanData's Salesforce app and BookIt Suite (XSS testing, SAST, DAST); closed all high/medium findings and supported successful audit completion.
- Implemented frontend monitoring and logging with New Relic across products, improving production visibility and reducing time-to-diagnosis by 40%.
- Created microservice-style platform layers and a shared design system / Angular component library for the suite: availability, state management, accessibility (ARIA, WCAG), localization/i18n, and machine translation.
- Designed and implemented a monorepo approach for BookIt products and partnered on CI/CD improvements, reducing build/test friction and improving release reliability.
- BookIt for Forms: enabled embeddable scheduling for webforms, including custom CSS injection and translated/customized copy.
- BookIt Handoff: architected initial implementation and advised refactor/redesign for v2 to improve maintainability and UX.
- BookIt Links: built framework to support custom links, landing pages, and embedded routing forms within the scheduling flow.

- Used AWS to manage and deliver customer-specific assets (custom logos for BookIt Suite) and to support storage/management of custom templates for LeanData Router.
- Served in dev on-call rotations, triaging production incidents and customer escalations; improved response workflows and reduced recurring issues by 20%.

Seung Lab, Princeton University

Jul 2019 - Jul 2023

Research Specialist

- Contributed to Neuroglancer, a 3D WebGL volumetric viewer written in TypeScript for the Connectome project, used by scientists and public proofreaders.
- Added user-facing capabilities including bug reporting, segment highlighting, and state sharing to streamline collaboration and support.
- Extended the annotation system with additional tools to improve analyst workflow and throughput. Average proofreading turnaround improved by 40%.
- Built NG-Extend, a Vue wrapper adding community-oriented features (e.g., chat) around Neuroglancer workflows.
- ProofreadingProgress: developed a Vue + Flask service for querying and aggregating neuron changelogs for attribution in research publications; leveraged Google Cloud for hosting/operations and improved query responsiveness by 10%.

The Reynolds and Reynolds Company

Apr 2016 - Jun 2019

Systems Software Developer

- Delivered web application enhancements and production fixes in response to customer issues across dealerships in the US, Canada, and the UK.
- Introduced web development training content (HTML, CSS, JavaScript, Node.js) for new-hire onboarding, decreasing ramp-up time by an average of 2 weeks for new hires.
- Modernized legacy Adobe ColdFusion applications by migrating to ECMAScript 5 with a Node.js backend, improving maintainability and performance by 60%.
- Built end-to-end test automation and CI pipelines (Selenium + Jenkins on CentOS 7), then migrated to Jest + Puppeteer in Docker to improve reliability and reduce execution time by 20%.

SELECTED PROJECT(S)

- **Project O'Neil** - Developed a playable 4X space strategy proof-of-concept using Electron, React, Three.js, R3F, and TypeScript with a real-time orbital simulation engine, procedural generation, economic/political/social simulation layers, and a 3D orbital map.
- **comix-ngn** - Built a lightweight JavaScript single-page application (AngularJS-inspired) for serving web comics directly in the client browser, reducing server-side hosting requirements.
- **Bombberman.Ai** - Developing a Bomberman 64-inspired 3D game using Electron, React, R3F, and TypeScript with a deterministic simulation engine and TensorFlow-driven AI, evolving into a generalized emulator ML platform for training agents on N64 games.

EDUCATION

Southern New Hampshire University

Dec 2018

M.S. Information Technology - GPA 3.9

The University of Chicago

Dec 2015

B.A. Computer Science
